Subject=PHP CH1

Submission Date -20/07/2023

1. Write a Program for Global Array.
    You have to create one function in php.
    Create 2 global variable and perform sum of that two variable.
    Result will be stored in global var 3.
    Ex. X and y is global variable (
    x=5, y=10) Global variable stores
    the result for x and y And print
    the result in out of function.

2. Write A simple Program for Associative Array.
    Array for Student_Rollno, Student_Name
    Stores values in that   array. Create one Session in   your code.
    Fetch Value in another page using of session.

3. Create Simple php program for Constants.
    Use Define Keyword for Creating the constants call/print the constants in function.

4. Create a simple html form and redirect the value in another page using the post
    Form contains Username ,Password, Jobtype, Email_id, Salary,.
    Give Remember MY ID feature in your form and store it in cookie.
    Use Multiple File Uploading for Profile Image.
    Form validation using PHP libraries and functions

5. Write a PHP code for conditions
    If Student's Percentage   >=85
    Print Grade = 'A'
    IF Student's Percentage >=75 and < 85
    Print Grade = 'B'
    If Student's Percentage >=60 < 75
    Print Grade = 'C'
    OTHERWISE
    Print Grade='FAIL'
